Journal of Crystal Growth 172 (1997) 536–537

JOURNAL OF CRYSTAL GROWTH

Subject index

Computer simulation
– of carbon chemisorption on silicon (100) 106
– of metalorganic chemical vapor deposition 389
– of reciprocal space 64
Convection 124, 200

Defects
– in diamond films 404
– in III–V compounds 58
Device characterization
– diodes 44, 75
– electronic materials 25, 37, 97
– light sensitivity 426
– quantum wells and dots 18
– superlattices 13, 291
Diamond 404, 416
Diffusional control
– of dopants 124
– of solidification 249
Diodes, see Device characterization
Doping
– of carbon in aluminum arsenide 5
– of carbon in gallium arsenide 5
– of manganese in lead tin telluride 455

Electronic materials, see Device characterization
Epitaxy, see Thin film growth
Etching
– chemical 5, 83, 269

Fullerene 136

Hydrodynamics, see Convection

Kinetics
– of growth 83, 249, 275, 381, 426, 499, 508, 521
– of nucleation 416

Lasers, crystals for
– neodymium yttrium vanadate 466
– yttrium lithium fluoride 200

Melt growth technique
– by Bridgman–Stockbarger method
– – of cadmium telluride 303, 313, 323
– – of cadmium zinc telluride 323, 337, 350
– – of gallium arsenide 313
– – of lead tin manganese telluride 455
– – of zinc selenide 361
– by Czochralski method
– – of lithium niobate 269
– – of silicon 120
– – of strontium fluoro vanadate 190
– – of terfenol-D 440
– by edge defined film fed
– – of silicon 115
– by uniaxial solidification
– – of yttrium lithium fluoride 200
Morphological stability
– of yttrium barium copper oxide 145

Nucleation
– of diamond 416
– of gallium phosphide 53
– of yttrium barium copper oxide 145
Numbers
– Grashof 124
– Hartmann 124
– Peclet 124

Quantum wells and dots, see Device characterization

Silicon 115
Solution growth technique
– by flux method
– – of neodymium aluminum borate 478
– by low temperature method
– – of glucoronic acid lactone 508
– – of glutamic acid 486
– – of hydroxy apatite 219
– – of L-arginine phosphate monohydrate 209
– – of potassium rubidium biphthatalate 226
– – of silver bromide 426
– by molten metal evaporation
– – of triuranium tetrabismuthide 459
– by pressure jump
– – of ice 521
– by top seeded solution
– – of yttrium vanadate 466
Stefan problem or moving boundary problem
– of dopants 124

Superconductivity materials, high T_c
– film
– – of barium potassium bismuthates 396
Superlattices, see Device characterization
Superlattices, multilayers
– of lead niobium sulphides 433
– of III–V compounds 13, 18
Surface structure
– of C_{60} 136
– of diamond films 404
– of gallium antimonide 37
– of silicon 106

Thin film growth, epitaxy
– by atomic layer molecular beam epitaxy
– – of aluminum arsenide 13
– – of gallium arsenide 13
– by chemical beam epitaxy
– – of indium phosphide 1
– by liquid phase electroepitaxy
– – of bulk crystals 259
– by liquid phase epitaxy
– – of barium potassium bismuthates 396
– – of gallium indium antimonide 514
– – of III–V compounds 58
– – of zinc selenide 75
– by molecular beam epitaxy
– – of cadmium mercury telluride 97
– – of cadmium zinc telluride 97
– – of gallium antimonide 37
– – of gallium arsenide 18, 275
– – of indium arsenide 18
– – of indium gallium arsenide phosphide
– – of strontium cuprate 156
– by organic molecular beam epitaxy
– – of 4-nitrobenzylidene-3-acetamono-4-methoxy-aniline 473
– by vapor phase epitaxy
– – through chemical vapor deposition
– – – of indium nitride 298
– – through metalorganic chemical vapor deposition
– – – of aluminum arsenide 5, 25
– – – of aluminum gallium arsenide 25
– – – of cadmium telluride 83
– – – of gallium arsenide 5, 25
– – – of gallium indium antimonide 284
– – – of gallium phosphide 53
– – – of indium gallium arsenide 44
– – – of zinc sulphide selenide 64
– – through pulsed laser ablation
– – – of yttrium barium copper oxide 145

Vapor growth technique
– by chemical transport
– – of erbium silicide 175
– – of lead niobium sulphide 433
– – of silicon with arsine n-type 376
– by evaporation and condensation
– – of cadmium telluride 370
– – of C_{60} 136
– – of chromium carbide 163
– – of erbium silicide 175
– – of molybdenum carbide 163
– – of strontium cuprate 156
– – of tungsten carbide 163
– by hot wall epitaxy
– – of zinc selenide 89
– by metalorganic chemical transport
– – of C_{60} 136
– theory of growth 416
– Vapor–liquid–solid growth
– of titanium carbide 171

Whisker growth
– of titanium carbide 171
